BESTA MOKSHIT SAI SREERAM

Mokshit0909 | mokshit-sai-sreeram | mokshit0909@gmail.com | +91 8074781184

Professional Summary

Final-year Computer Science & Engineering (AI & ML) undergraduate with hands-on project experience developing Python-based applications, REST APIs, database-backed services, and authentication workflows. Familiar with modular backend design, application debugging, and maintaining clear boundaries between API, database, and business-logic components. Strong foundation in programming, DBMS, operating systems, and computer networks, with an interest in software automation, deployment workflows, and DevOps engineering.

Education

B.Tech – Computer Science & Engineering (AI & ML) **2023 – 2027**
B V Raju Institute of Technology, Narsapur CGPA: 8.15/10

Intermediate – MPC **2021 – 2023**
Telangana State Board 92.5%

Technical Skills

Programming: Python, Java, SQL

Backend Development: FastAPI, REST APIs, SQLAlchemy

Databases: PostgreSQL, MySQL

Web Technologies: React, HTML, CSS, JavaScript

Computer Science Foundations: Object-Oriented Programming, DBMS, Operating Systems, Computer Networks, Data Structures & Algorithms

Authentication & Access Control: JWT, bcrypt, role-based authorization

Developer Tools: Git, GitHub, Jupyter Notebook

AI / Computer Vision: TensorFlow, OpenCV, Transformers, NumPy, Pandas

Projects

SYNAPSE AI – AI-Powered Recruitment & Interview Platform

Technologies: React, FastAPI, Python, PostgreSQL, SQLAlchemy, JWT, Gemini

- Developed a modular application with separate Candidate and Recruiter workflows for hiring, interview management, and candidate assessment.
- Built REST API and database workflows using FastAPI, SQLAlchemy, and PostgreSQL to manage users, jobs, interviews, and evaluation records.
- Implemented authentication using bcrypt password hashing and JWT access tokens, including token expiration and session validation.
- Implemented role-based authorization for protected APIs and separated authentication, database models, API routes, business logic, and AI-processing components.
- Worked across frontend, backend, and database components, gaining practical experience in application integration, debugging, and maintainable service structure.

Robust Object Detection in Low-Visibility Environments

Technologies: Python, TensorFlow, OpenCV, GroundingDINO, Swin Transformer

- Developed a computer-vision framework to detect objects under fog, blur, and low-light conditions.
- Implemented adaptive confidence thresholding and temporal-consistency processing to improve prediction reliability and reduce frame-to-frame instability.
- Collaborated within a three-member research team and reported approximately 15% improvement in detection robustness through adaptive confidence calibration.

Achievements & Certifications

- Solved **150+ algorithmic programming problems** on LeetCode covering arrays, strings, linked lists, trees, graphs, recursion, and basic dynamic programming.
- Completed the **Smart Coder Program** by Smart Interviews (2025), focused on data structures, algorithms, and interview-oriented problem solving.
